

一、定义

```
student = {}
```

```
student = dict()
```

标签和数据值之间用冒号 “:” 连接

例如:

```
bands={'Marxes':['Moe','Curly'], 'KK':[True, 'moon']}
```

二、更新/合并字典

```
bands.update(JayChou='number1')
```

三、缩减字典

```
del bands['Champions']
```

```
bands.popitem()
```

四、访问字典

```
bands['JayChou']
```

返回关键字: `bands.keys()`

返回值: `bands.values()`

返回所有项目: `bands.items()`
